

NIKHITHA BIJJALA

9297242894 | b.nikhitha.nb@gmail.com

SUMMARY

Senior Software Engineer with 4 years of experience designing secure, scalable microservices for fintech platforms. Expert in Java, Spring Boot, and cloud-native architectures, with proven expertise in building RESTful APIs, OAuth2 authentication, and distributed event-driven systems. Specializes in developing high-performance backend services with advanced AI integration and robust security frameworks for complex financial technology environments.

WORK EXPERIENCE

Software Engineer | Capital One

01/2025 - Present

- Engineered scalable Spring Boot microservices to modernize core banking transaction processing systems, improving system reliability for retail banking and risk management teams handling 2M+ daily transactions.
- Architected event-driven pipelines using Apache Kafka to process real-time payment streams, reducing transaction processing latency by 35% for fraud analytics and compliance stakeholders, enabling \$50M in annual risk mitigation and improving real-time detection accuracy by 42%.
- Developed secure RESTful APIs using Java and Spring Security with OAuth2, ensuring regulatory compliance for 12+ internal banking applications and third-party integrations, reducing security vulnerabilities by 45% and accelerating integration onboarding time by 60% for enterprise partners.
- Optimized cloud-native deployments using AWS ECS Fargate, enabling infrastructure auto-scaling to improve system uptime to 88% for high-availability banking platforms.
- Implemented CI/CD pipelines using Jenkins to automate build and deployment workflows, reducing release cycles by 40% for distributed engineering teams.
- Designed centralized logging and observability using ELK stack to monitor distributed microservices, reducing mean time to resolution (MTTR) by 30% for production support and SRE teams.

Software Java Developer | Bharatpe

06/2020 - 12/2022

- Developed high-performance backend services using Java and Spring Boot to power payment gateway processing systems, handling transaction settlements for 500+ merchant partners, reducing transaction processing time by 35% and supporting \$250M in annual payment volume across enterprise clients.
- Engineered real-time payment event streaming using Apache Kafka to process over 10,000 events per second with low latency for payment reconciliation systems, reducing transaction reconciliation time by 45% and improving financial accuracy for the enterprise's treasury team.
- Built RESTful APIs using Node.js to enable seamless integration with 8 third-party payment providers, reducing integration development time by 45% for fintech clients.
- Implemented optimized database queries in MySQL to improve transaction retrieval performance, reducing query latency by 25% for reporting and analytics systems.
- Containerized applications using Docker and orchestrated deployments with Kubernetes, standardizing environments to reduce deployment issues by 60% for engineering teams.
- Automated build pipelines using Jenkins to streamline continuous delivery workflows, cutting manual deployment efforts by 40% for cross-functional engineering teams, reducing release cycle time from 5 days to 2 days and improving overall team productivity by 25%.

SKILLS

Programming Languages: Java, Python, TypeScript, JavaScript, SQL, C++

Backend Technologies: Spring Boot, Node.js, Express.js, Microservices Architecture, REST APIs, OAuth2, JWT, Distributed Systems, API Design

Frontend Technologies: React.js, HTML5, CSS3, Responsive UI Development

Databases: PostgreSQL, MySQL, Redis, NoSQL, Database Design

Cloud & DevOps: AWS, Docker, Kubernetes, Jenkins, CI/CD Pipelines, Serverless Architecture, Auto-Scaling

Testing & Quality: Performance Monitoring, System Diagnostics, Code Reviews, Debugging

Tools & Practices: Agile, Scrum, SDLC, Object-Oriented Programming, Multithreading, System Design, Secure Coding

EDUCATION

Suny Albany

01/2023 - 12/2024

MS
